

# jQuery and the Missing Mobile Link

Mark Drew  
Railo Consulting  
Munich CFCamp 2011

Hi!

Mark Drew – Railo Technologies

Friday, 28 October 11

Railo Consulting UK's CEO  
Web Development Consultancy based in London, Zurich, New York and San Francisco

Excel at CFML application development, training, performance tuning  
ColdFusion & CFML Developer since '97 and Web developer since '94  
Involved in various CFML Frameworks, ORMs and IDE's

CFEclipse's (CFML IDE) Lead Developer

Reactor ORM Project Manager

ColdSpring (Dependency Injection) Contributor

Model Glue and ColdBox (MVC) Contributor

ColdBox Contributor

# Agenda

# PhoneGap

Mark Drew – Railo Technologies

Friday, 28 October 11

Looking at JQuery Mobile  
Then Looking into PhoneGap and how they can go together.

# JQUERY MOBILE

A “touch optimised” HTML5 Framework for building mobile websites and apps.

Mark Drew – Railo Technologies

Friday, 28 October 11

Looking at JQuery Mobile  
Then Looking into PhoneGap and how they can go together.

# Touch Optimised?

- Big enough to touch!
- No Typing
- No Mouse Over, Mouse Move
- Optimised Form Controls

Mark Drew – Railo Technologies

Friday, 28 October 11

UI Controls need to be big enough to touch.

Minimize the need for typing

No mouseover, mousemove events, instead you have events like swipe, swipeleft, swiperight, orientationchange, tap, taphold, etc.

Optimised Form Controls

(No the mouse isn't touching himself!!)

# Mobile OS Support

Mark Drew – Railo Technologies

# Mobile OS Support

Platform	Version	Native	Opera Mobile	Opera Mini	Fennec	Ozone	Netfront	Phonegap

Mark Drew – Railo Technologies

Raile But I don't know JQuery!

Mark Drew – Railo Technologies

Friday, 28 October 11

You don't even need to know JavaScript to build a simple jQuery Mobile Web Site or App.

- If you know jQuery you will feel right at home, when it comes time to add dynamic interactions.
- But don't worry if you don't know any jQuery!

Raile But I DO know JQuery!

Mark Drew – Railo Technologies

Friday, 28 October 11

Not really like JQuery in it's syntax, more like HTML than anything else. (more on that later)  
But has a lot of config stuff that you can access in the standard JQuery way.

Mark Drew – Railo Technologies

Friday, 28 October 11

- Pages & Dialogs
- Toolbars (Header & Footer bars)
- Button's (Including a set of stock icons)
- Form Controls (Slider's, Toggles, enhanced radio, checkbox, etc)
- List View Control

# Railo But what about the code?

A screenshot of a Mac OS X text editor window titled "simple.html". The code in the editor is as follows:

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>JQueryMobile Demo</title>
5   <script type="text/javascript" src="jquery-1.6.2.min.js"></script>
6   <script type="text/javascript" src="jquery.mobile-1.0a4.1.min.js"></script>
7   <link rel="stylesheet" href="jquery.mobile-1.0a4.1.min.css" />
8 </head>
9 <body>
10 </body>
11 </html>
```

The editor interface includes a toolbar with icons for file operations, a status bar at the bottom showing "Line: 4 Column: 37", and a tab size selector set to 4.

Mark Drew – Railo Technologies

Friday, 28 October 11

1) HTML5 Doctype

# Railo But what about the code?

A screenshot of a code editor window titled "simple.html". The code editor shows the following HTML5 code:

```
1 <!DOCTYPE html>
2 <html>
3   <head>
4     <title>JQueryMobile Demo</title>
5     <script type="text/javascript" src="jquery-1.6.2.min.js"></script>
6     <script type="text/javascript" src="jquery.mobile-1.0a4.1.min.js"></script>
7     <link rel="stylesheet" href="jquery.mobile-1.0a4.1.min.css" />
8   </head>
9   <body>
10  </body>
11 </html>
```

The code editor interface includes a status bar at the bottom with "Line: 4 Column: 37", a "HTML" tab, and "Tab Size: 4".

Mark Drew – Railo Technologies

Friday, 28 October 11

1) HTML5 Doctype

# Railo But what about the code?

A screenshot of a Mac OS X text editor window titled "simple.html". The code editor displays the following HTML and CSS code:

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>JQueryMobile Demo</title>
5   <script type="text/javascript" src="jquery-1.6.2.min.js"></script>
6   <script type="text/javascript" src="jquery.mobile-1.0a4.1.min.js"></script>
7   <link rel="stylesheet" href="jquery.mobile-1.0a4.1.min.css" />
8 </head>
9 <body>
10 </body>
11 </html>
```

The line numbers are on the left, and the code is color-coded: blue for HTML tags, green for attributes, and yellow for the jQuery script tag. The status bar at the bottom shows "Line: 4 Column: 37" and "HTML".

Mark Drew – Railo Technologies

Friday, 28 October 11

2) jQuery Core JS

# Railo But what about the code?

A screenshot of a Mac OS X text editor window titled "simple.html". The code in the editor is as follows:

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>JQueryMobile Demo</title>
5   <script type="text/javascript" src="jquery-1.6.2.min.js"></script>
6   <script type="text/javascript" src="jquery.mobile-1.0a4.1.min.js"></script>
7   <link rel="stylesheet" href="jquery.mobile-1.0a4.1.min.css" />
8 </head>
9 <body>
10 </body>
11 </html>
```

The line "6 <script type="text/javascript" src="jquery.mobile-1.0a4.1.min.js"></script>" is highlighted with a yellow background. The status bar at the bottom shows "Line: 4 Column: 37" and "HTML".

Mark Drew – Railo Technologies

Friday, 28 October 11

3) jQuery Mobile JS

# Railo But what about the code?

A screenshot of a Mac OS X text editor window titled "simple.html". The code in the editor is as follows:

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>JQueryMobile Demo</title>
5   <script type="text/javascript" src="jquery-1.6.2.min.js"></script>
6   <script type="text/javascript" src="jquery.mobile-1.0a4.1.min.js"></script>
7   <link rel="stylesheet" href="jquery.mobile-1.0a4.1.min.css" />
8 </head>
9 <body>
10 </body>
11 </html>
```

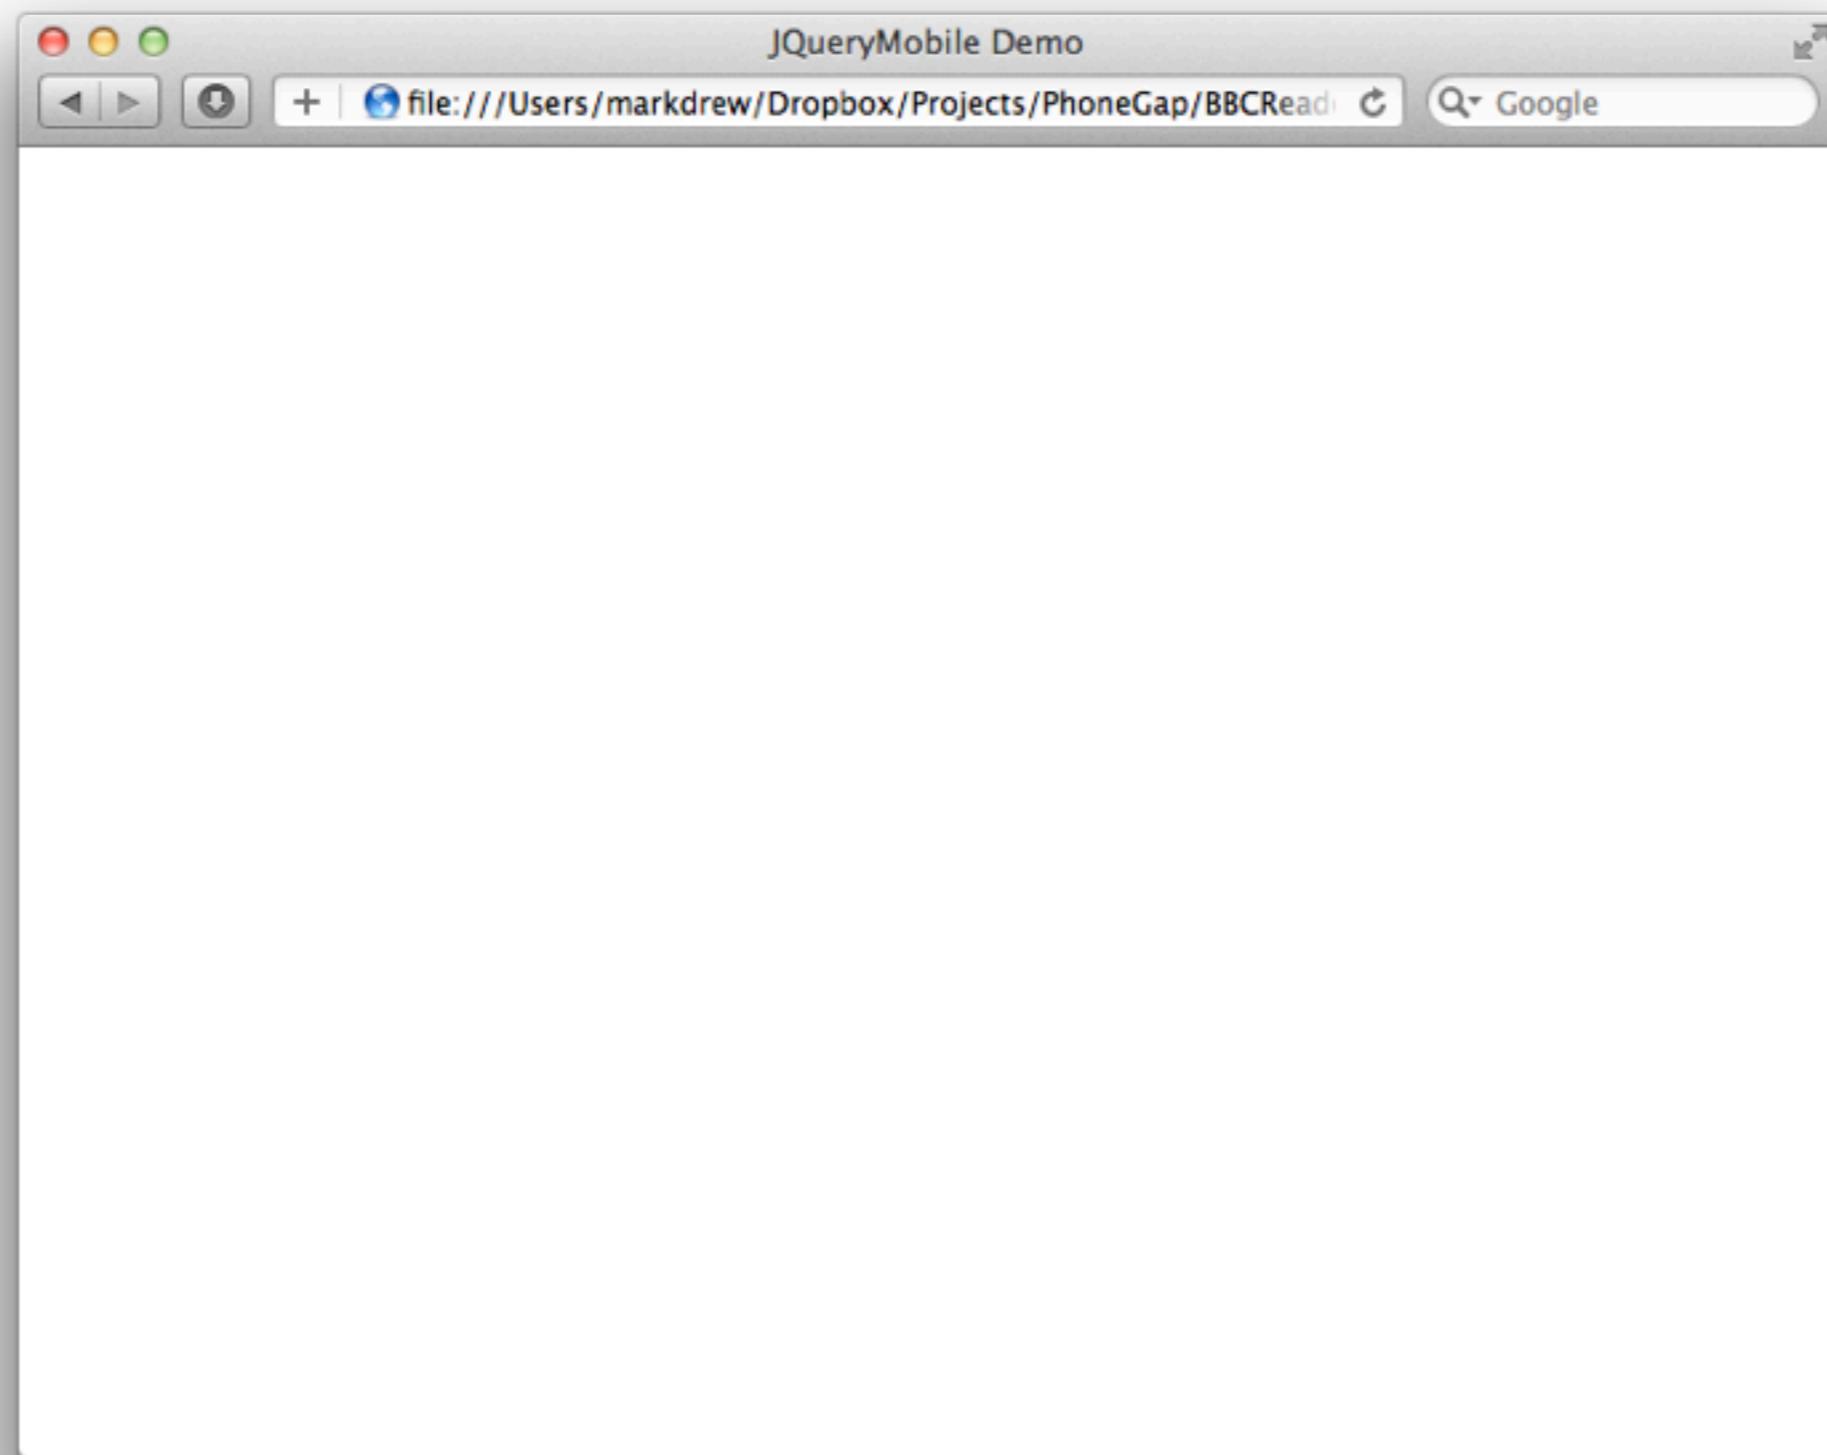

The line `<link rel="stylesheet" href="jquery.mobile-1.0a4.1.min.css" />` is highlighted with a yellow background. The status bar at the bottom shows "Line: 4 Column: 37" and "HTML".

Mark Drew – Railo Technologies

Friday, 28 October 11

4) jQuery Mobile CSS

# Railo But what about the code?

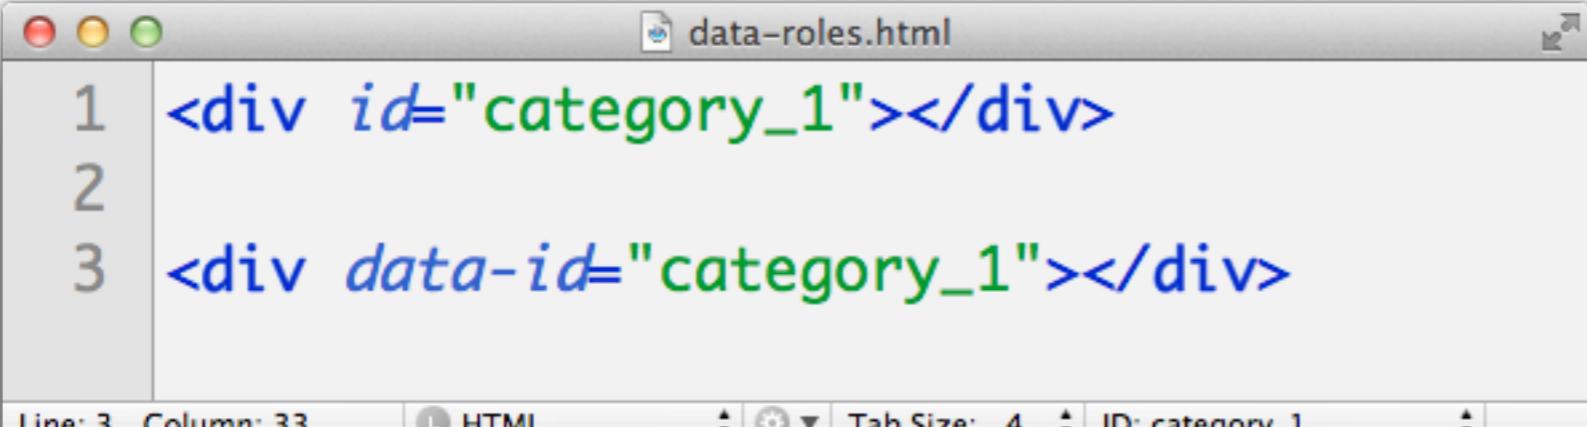

Mark Drew – Railo Technologies

Friday, 28 October 11

Nothing there yet, we have to add some Data-Roles

# Data-Role?

- Added by HTML5
- Starts with “data-”
- Custom attributes.

```
1 <div id="category_1"></div>
2
3 <div data-id="category_1"></div>
```

Line: 3 Column: 33    HTML    Tab Size: 4    ID: category\_1

More here: <http://ejohn.org/blog/html-5-data-attributes/>

# HTML

Mark Drew – Railo Technologies

Friday, 28 October 11

HTML5 added a feature called custom data attributes.

Any tag attribute that begins with data- may be used as a custom data storage associated with the element.

So instead of doing `<div id="cat#cat.id#"></div>` you can do `<div data-id="#cat.id#">...</div>` and it will still pass as valid HTML5.

More at John Resig's blog: <http://ejohn.org/blog/html-5-data-attributes/>

# Railo JQueryMobile & Data-Role

- HTML Attribute: **data-role**

- `data-role="page"`
- `data-role="header"`
- `data-role="footer"`
- `data-role="navbar"`
- `data-role="button"`
- `data-role="listview"`
- `data-role="controlgroup"`
- `data-role="fieldcontain"`

Mark Drew – Railo Technologies

Friday, 28 October 11

jQuery Mobile uses an HTML attribute called: `data-role` to associate an element with a widget.  
For example:

`data-role="page" data-role="header" data-role="footer" data-role="navbar" data-role="button" data-role="listview" data-role="controlgroup" data-role="fieldcontain"`

# Pages

```
<div data-role="page" id="home">
  <div data-role="header">
    <h1>Home</h1>
    <a href="#settings" data-role="button">Settings</a></div>
  <div data-role="content">
    This is the homepage
  </div>
</div>
<div data-role="page" id="settings" data-theme="b">
  <div data-role="header">
    <h1>Settings</h1>
  </div>
  <div data-role="content">
    Lorum Ipsum...
  </div>
</div>
```

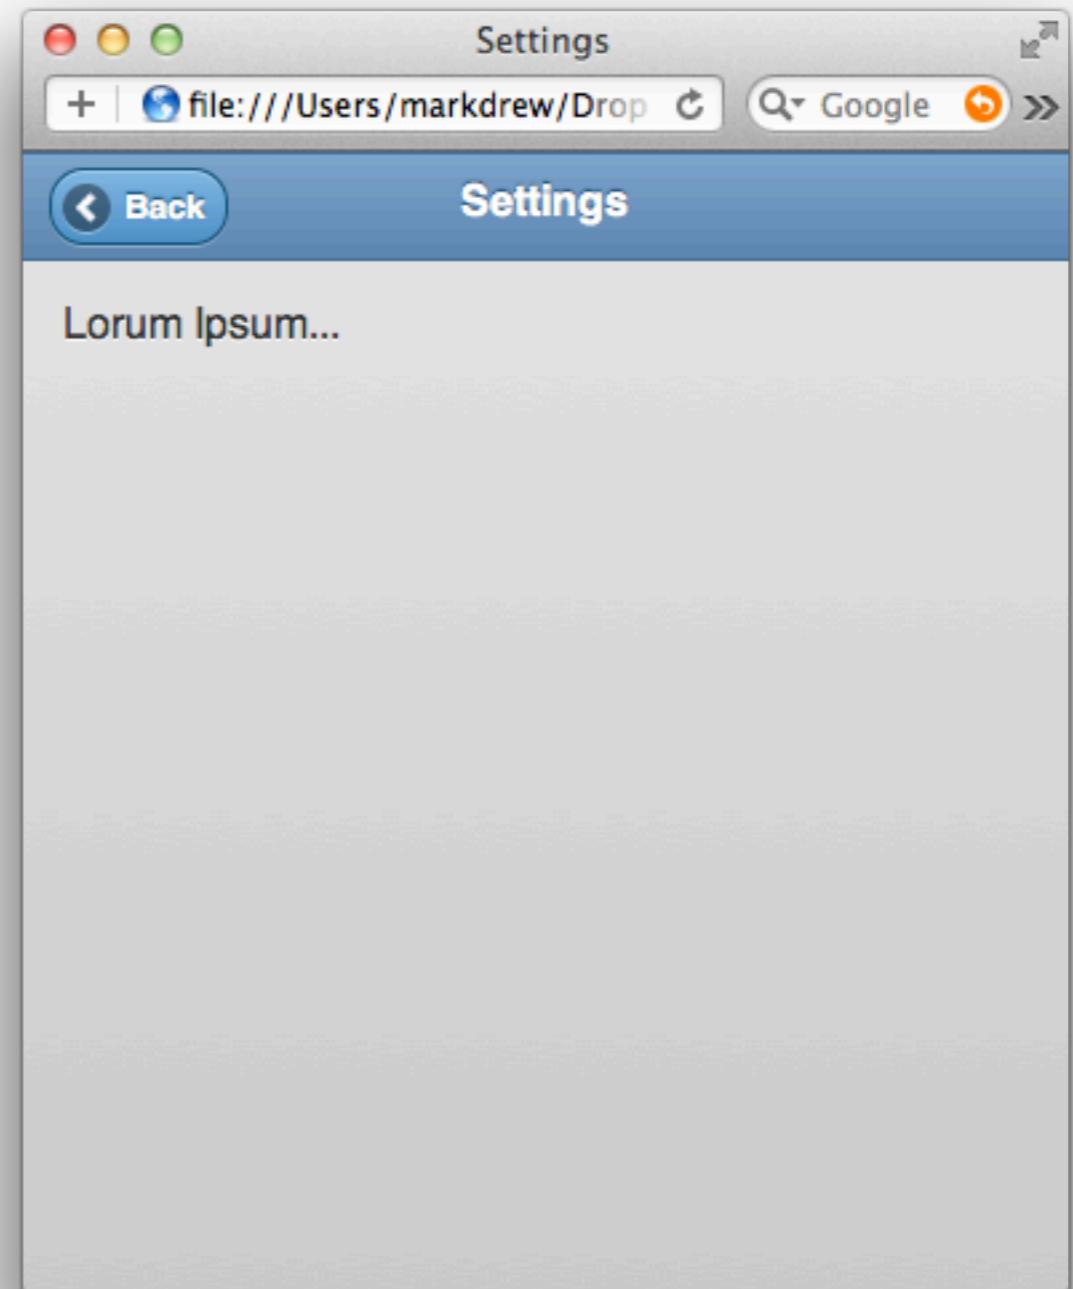

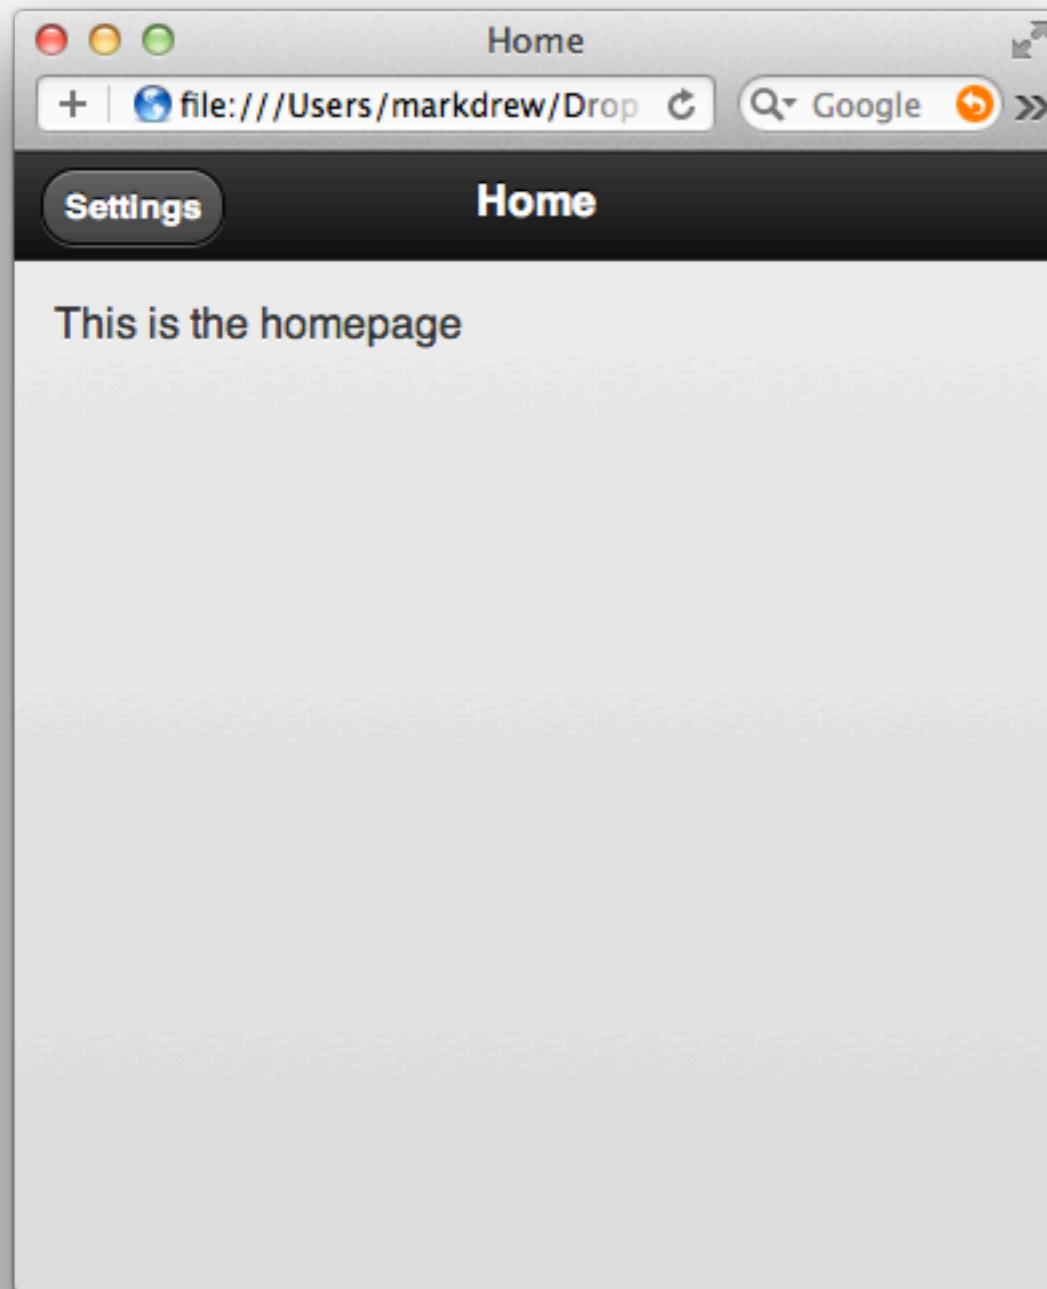

```
<\p>
<\p>
  Lorum Ipsum...
<div data-role="content">
```

Mark Drew – Railo Technologies

Friday, 28 October 11

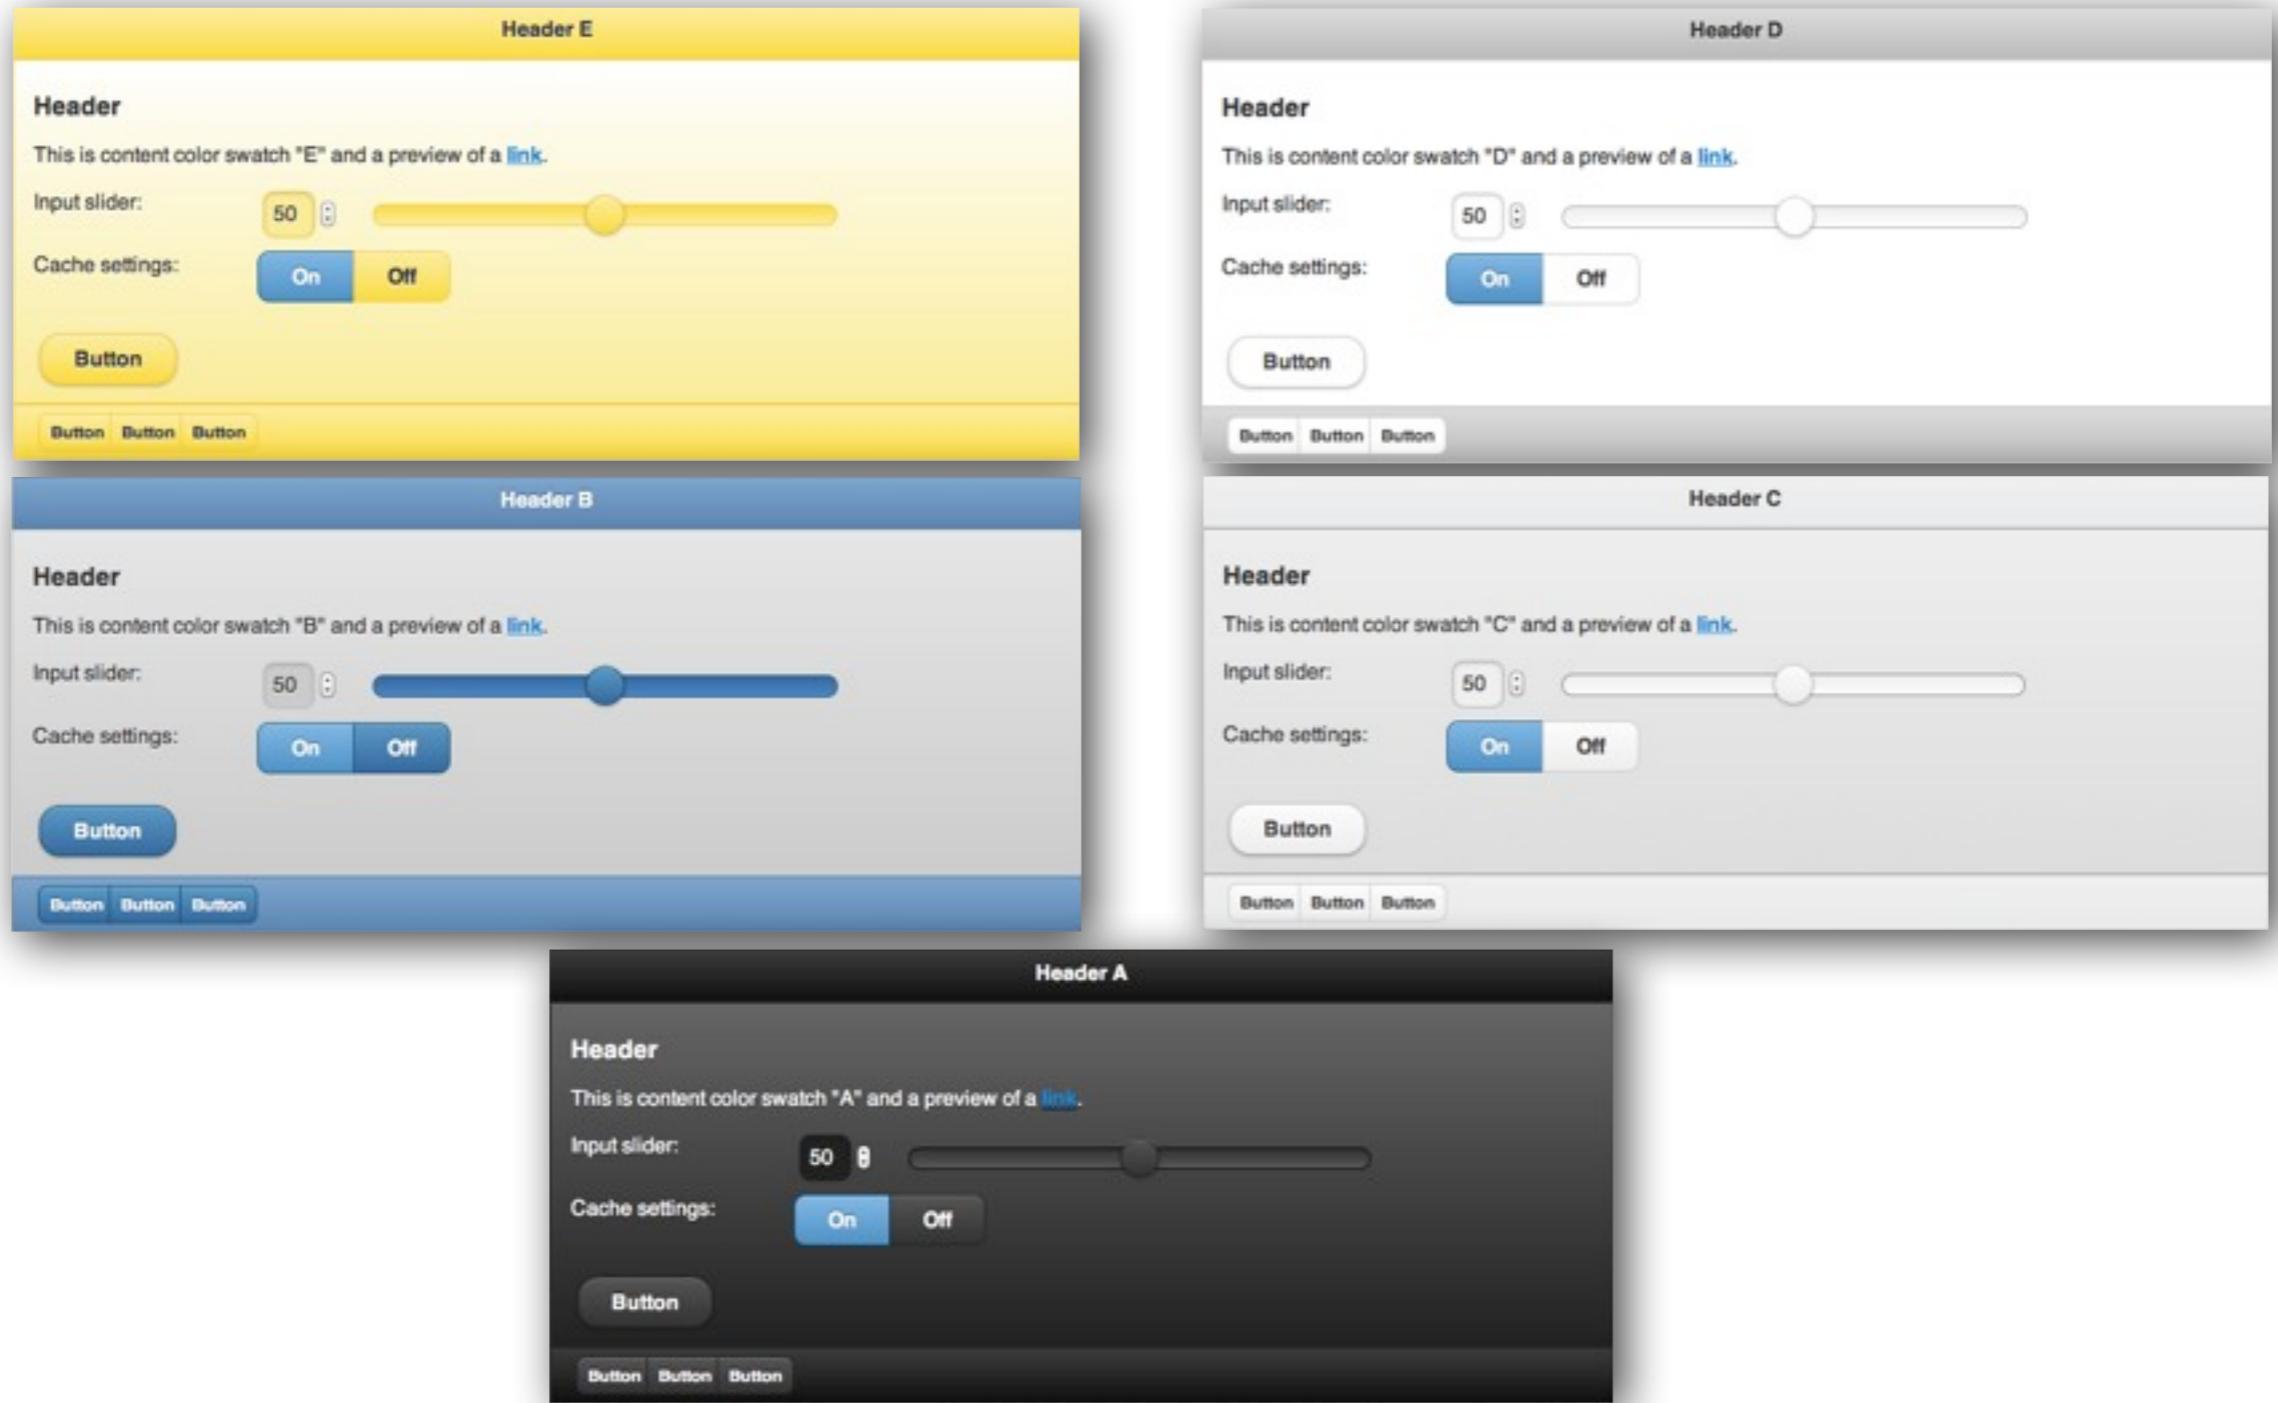

A HTML Document can consist of multiple pages. Pages are linked together via a link to #pageElementID

# Pages

Mark Drew – Railo Technologies

# Themes

Mark Drew – Railo Technologies

Friday, 28 October 11

- jQuery Mobile comes with several color schemes which can be controlled using the data-theme attribute.
- You can specify a data-theme on a page, buttons, toolbar's, etc. • Try specifying data-theme=a,b,c,d,e

# Buttons

Left arrow - data-icon="arrow-l"

 My button

Right arrow - data-icon="arrow-r"

 My button

Up arrow - data-icon="arrow-u"

 My button

Down arrow - data-icon="arrow-d"

 My button

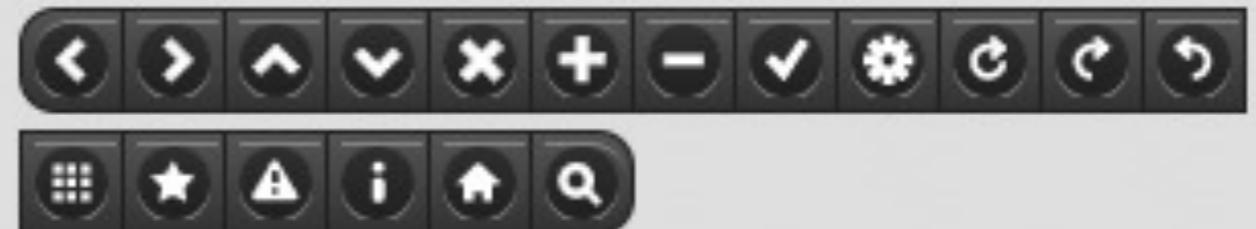

Delete - data-icon="delete"

 My button

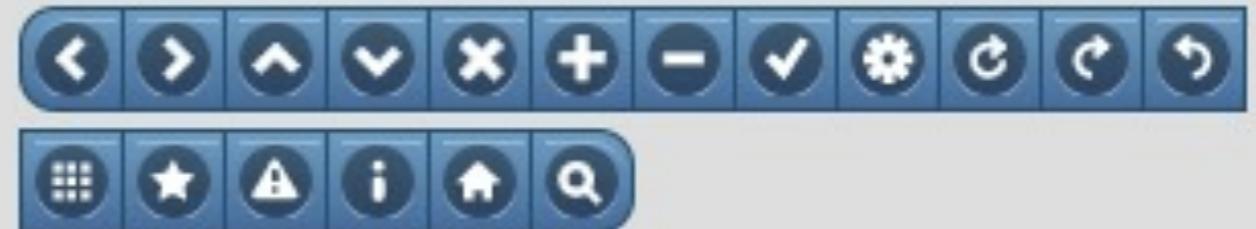

Plus - data-icon="plus"

 My button

## Swatch "A" themed buttons

## Swatch "B" themed buttons

## Swatch "C" themed buttons

Mark Drew – Railo Technologies

Friday, 28 October 11

You can create a button by adding data-role="button" to a button tag, an a tag, or input type=submit|button|reset|image

Add an icon to the button using data-icon="icon-name"

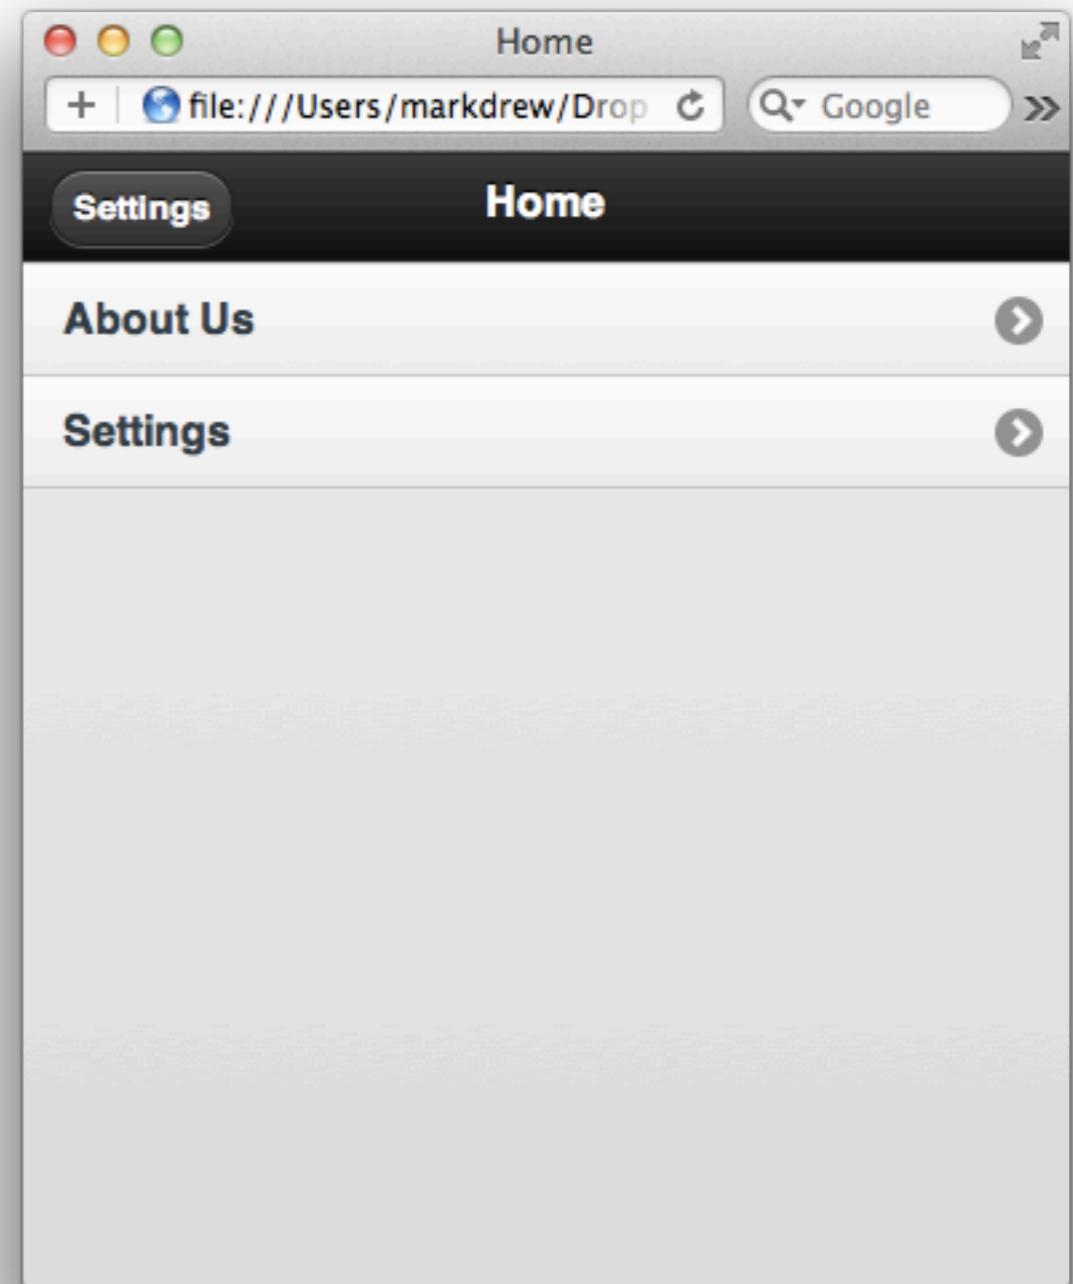

By default the icon goes on the left, you can put it on the right, top or bottom by specifying data-iconpos or to just use the icon use data-iconpos="notext"

Comes with several icons

- You can use your own custom icons easily.

# List View

```
<ul data-role="listview" data-theme="c">
  <li><a href="#about">About Us</a></li>
  <li><a href="#settings">Settings</a></li>
</ul>
```

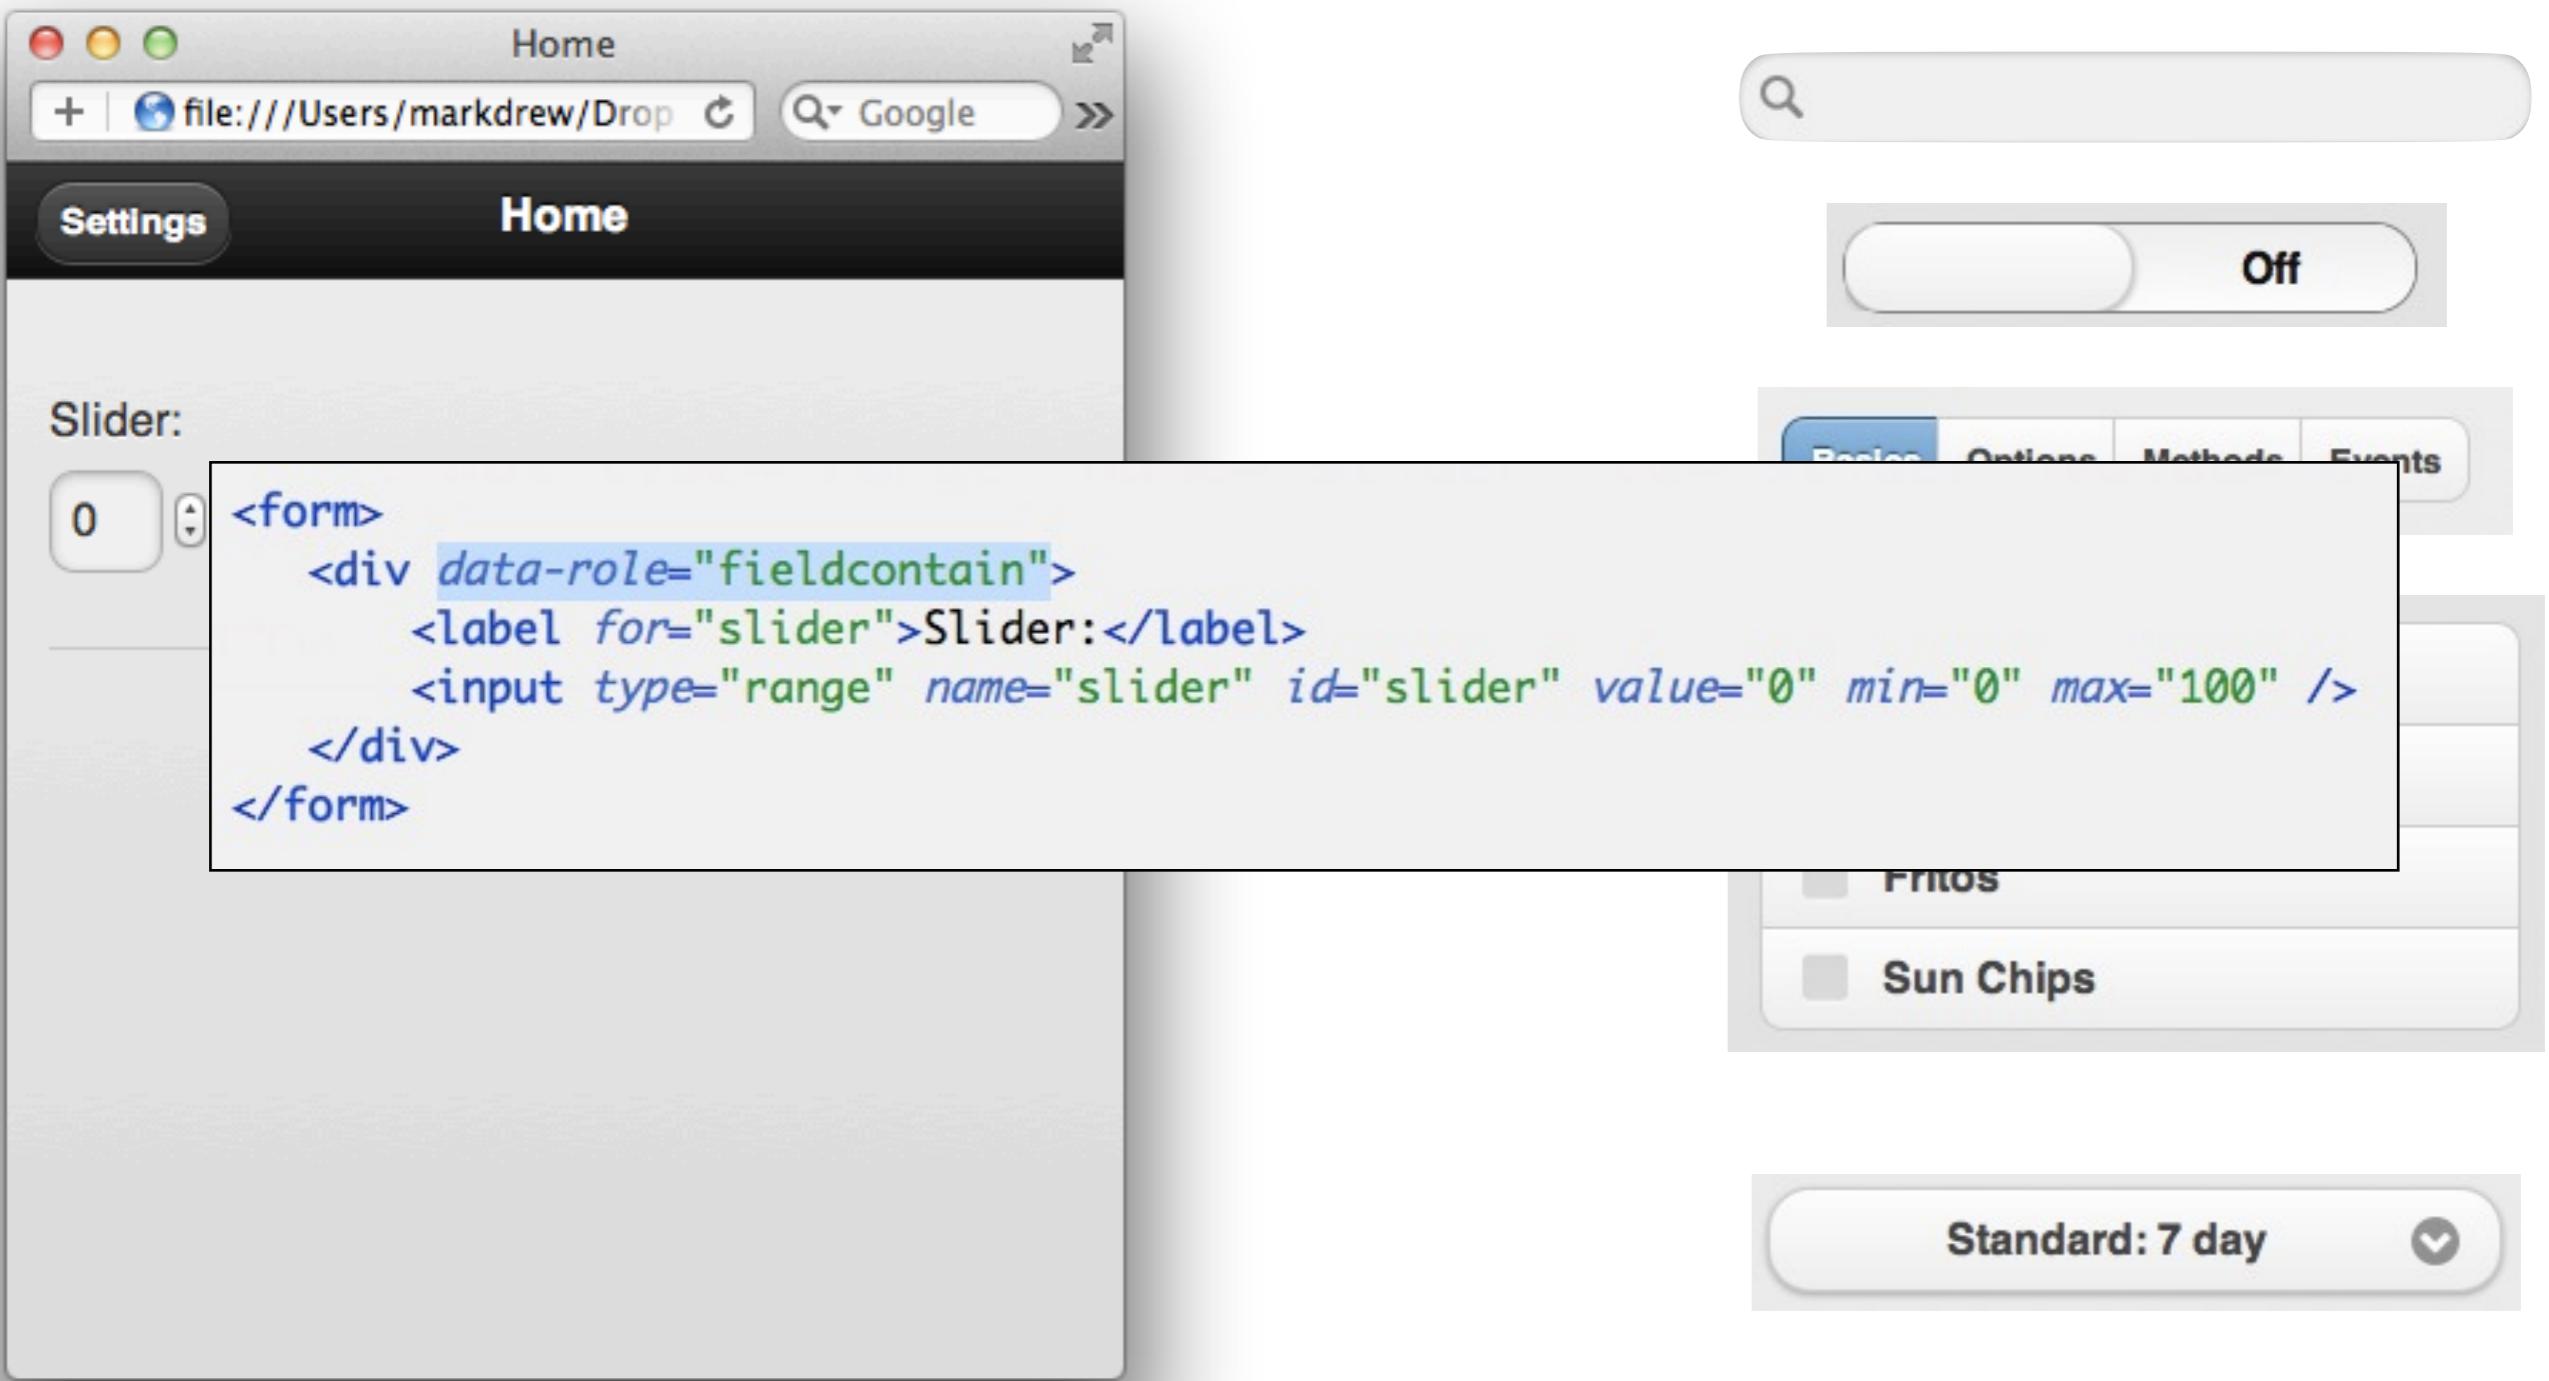

Mark Drew – Railo Technologies

Friday, 28 October 11

More Advanced List View options available  
Such as inline lists, lists with images etc.  
see docs.

# Forms

Mark Drew – Railo Technologies

Friday, 28 October 11

JQuery makes mobile optimised form controls, such as Numbers Email etc.

Other Items include sliders, range dialogs

Search inputs, select, checkboxes

Form Element's should be wrapped in a div with a data- role="fieldcontain" attribute.

# Demo!

JQuery Mobile  
Server Side example

Mark Drew – Railo Technologies

Friday, 28 October 11

The bit where things go wrong!

# jQuery Mobile

<http://jquerymobile.com/>

Mark Drew – Railo Technologies

Friday, 28 October 11

Better support for toolbar fixed (in iOS5 coming this Autumn!)

pushState: Now, clean URLs with Ajax-based navigation

New beforechangeevent: Simple hook for building dynamic pages with JavaScript

We've just scratched the surface of what you can do with jQuery Mobile.

- Checkout: <http://jquerymobile.com/>

# Agenda

## PhoneGap

Mark Drew – Railo Technologies

Friday, 28 October 11

Back to our agenda  
Let's take a quick look at PhoneGap

# PhoneGap

A Set of templates for building native iOS, Android, Blackberry, Symbian, and WebOS using HTML, CSS, and JavaScript

## Phone**Gap**

Mark Drew – Railo Technologies

Friday, 28 October 11

A Set of templates for building native iOS, Android, Blackberry, Symbian, and WebOS Applications using HTML, CSS, and JavaScript.  
Mainly a set of plugins to the respective SDK, such as XCode

# Phonegap.js

<http://docs.phonegap.com>

Mark Drew – Railo Technologies

Friday, 28 October 11

- phonegap.js contains a device neutral javascript API for accessing native device API's such as:
- Camera
- Accelerometer
- GPS
- Compass
- Address Book / Contacts
- Media (Audio / Video)
- Events and notifications
- And More see [docs.phonegap.com](http://docs.phonegap.com) for a full reference.

iOS

Android

Blackberry

HP WebOS

Symbian

Bada

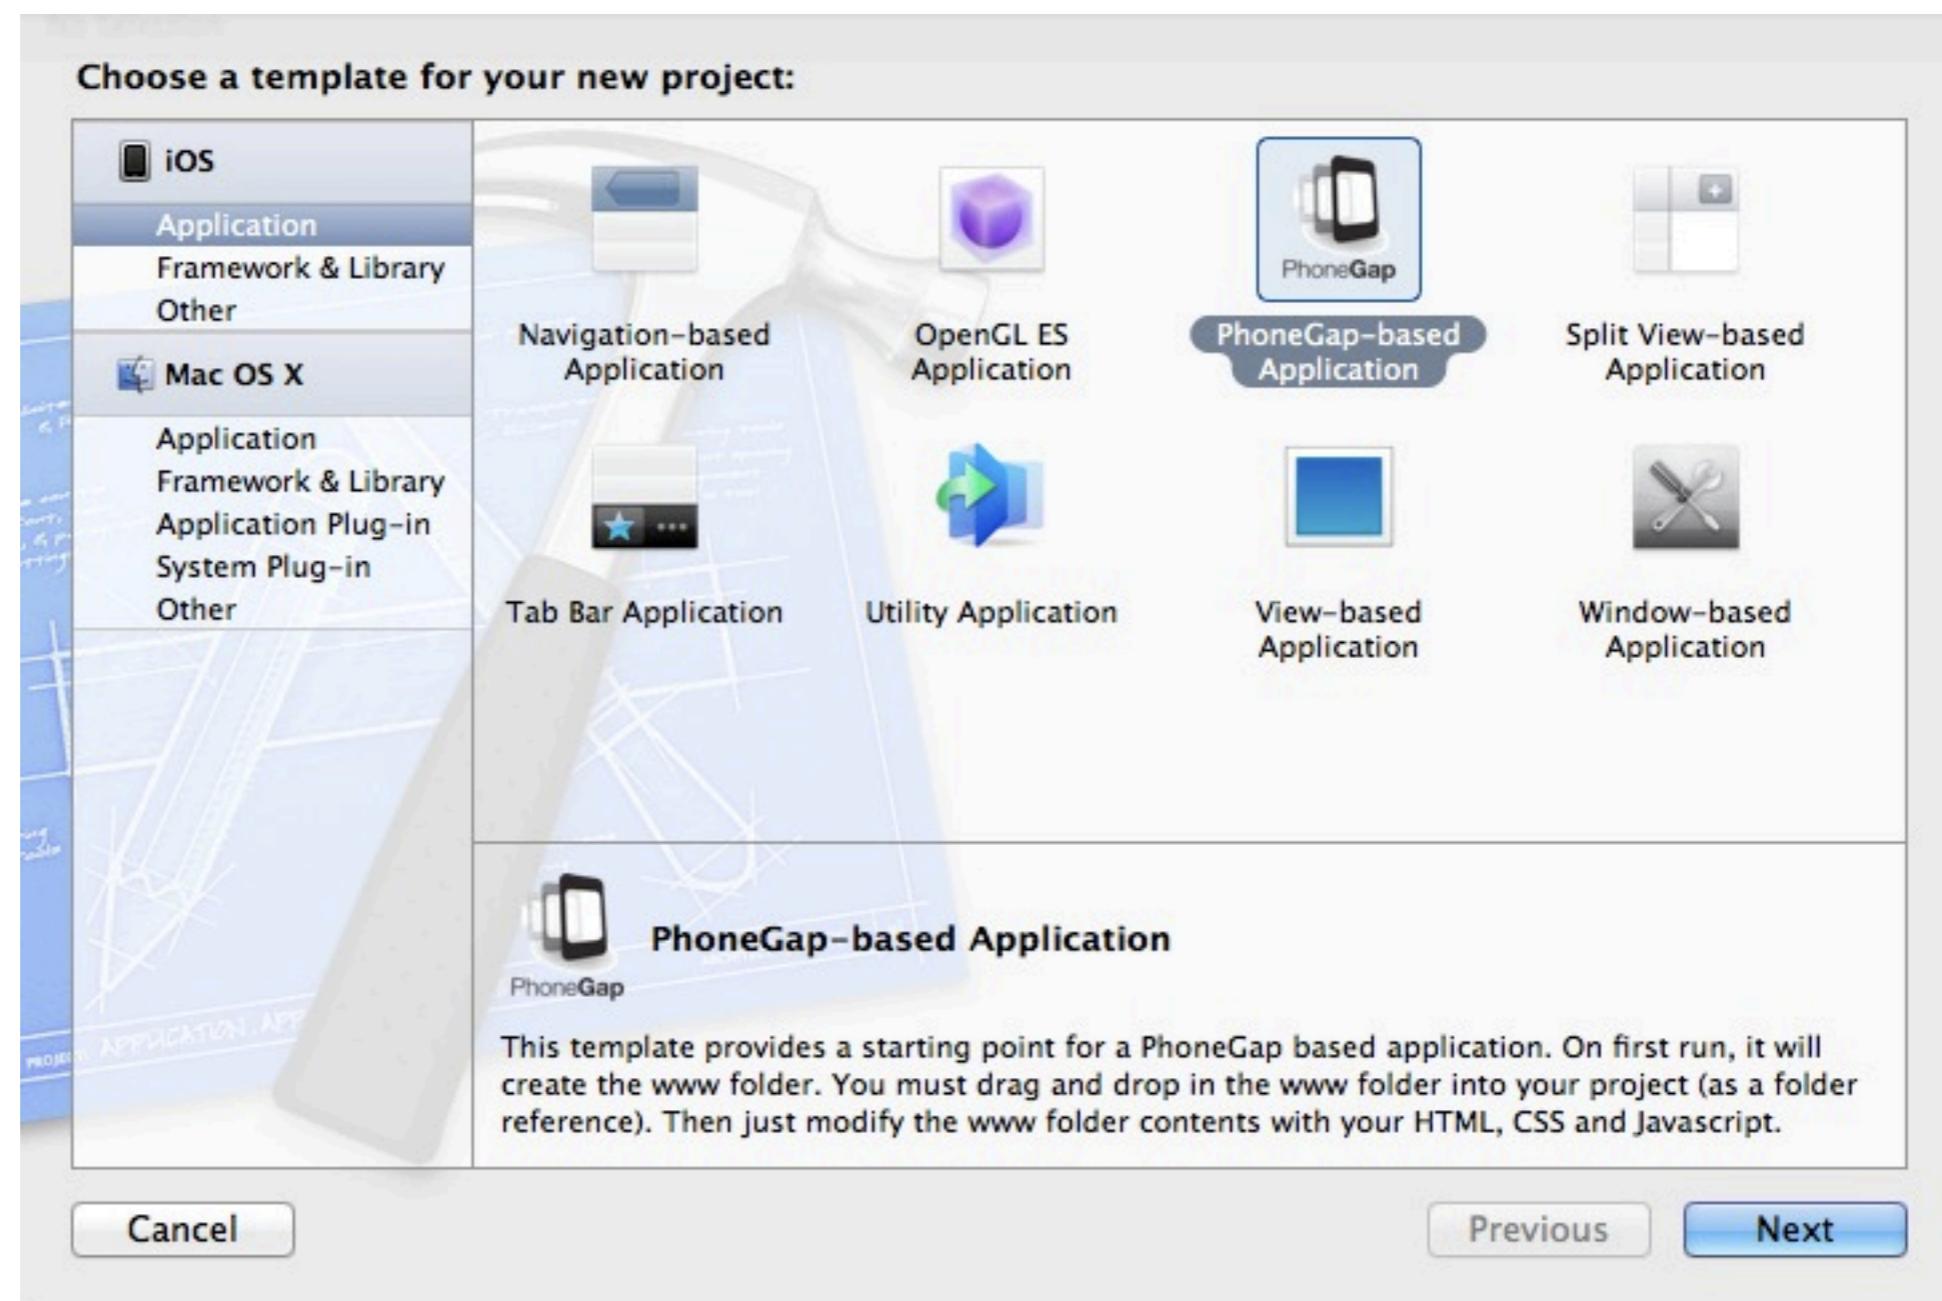

- Buy XCode on the Apple App Store
- Download PhoneGap (from <http://phonegap.com>)
- Run the /iOS/PhoneGap-10.0.0.dmg image
- Run the PhoneGap-10.0.0.pkg file
- Launch Xcode, create a new project, and select the PhoneGap Template
- Click Build & Run to launch the iOS Simulator.

Mark Drew – Railo Technologies

Friday, 28 October 11

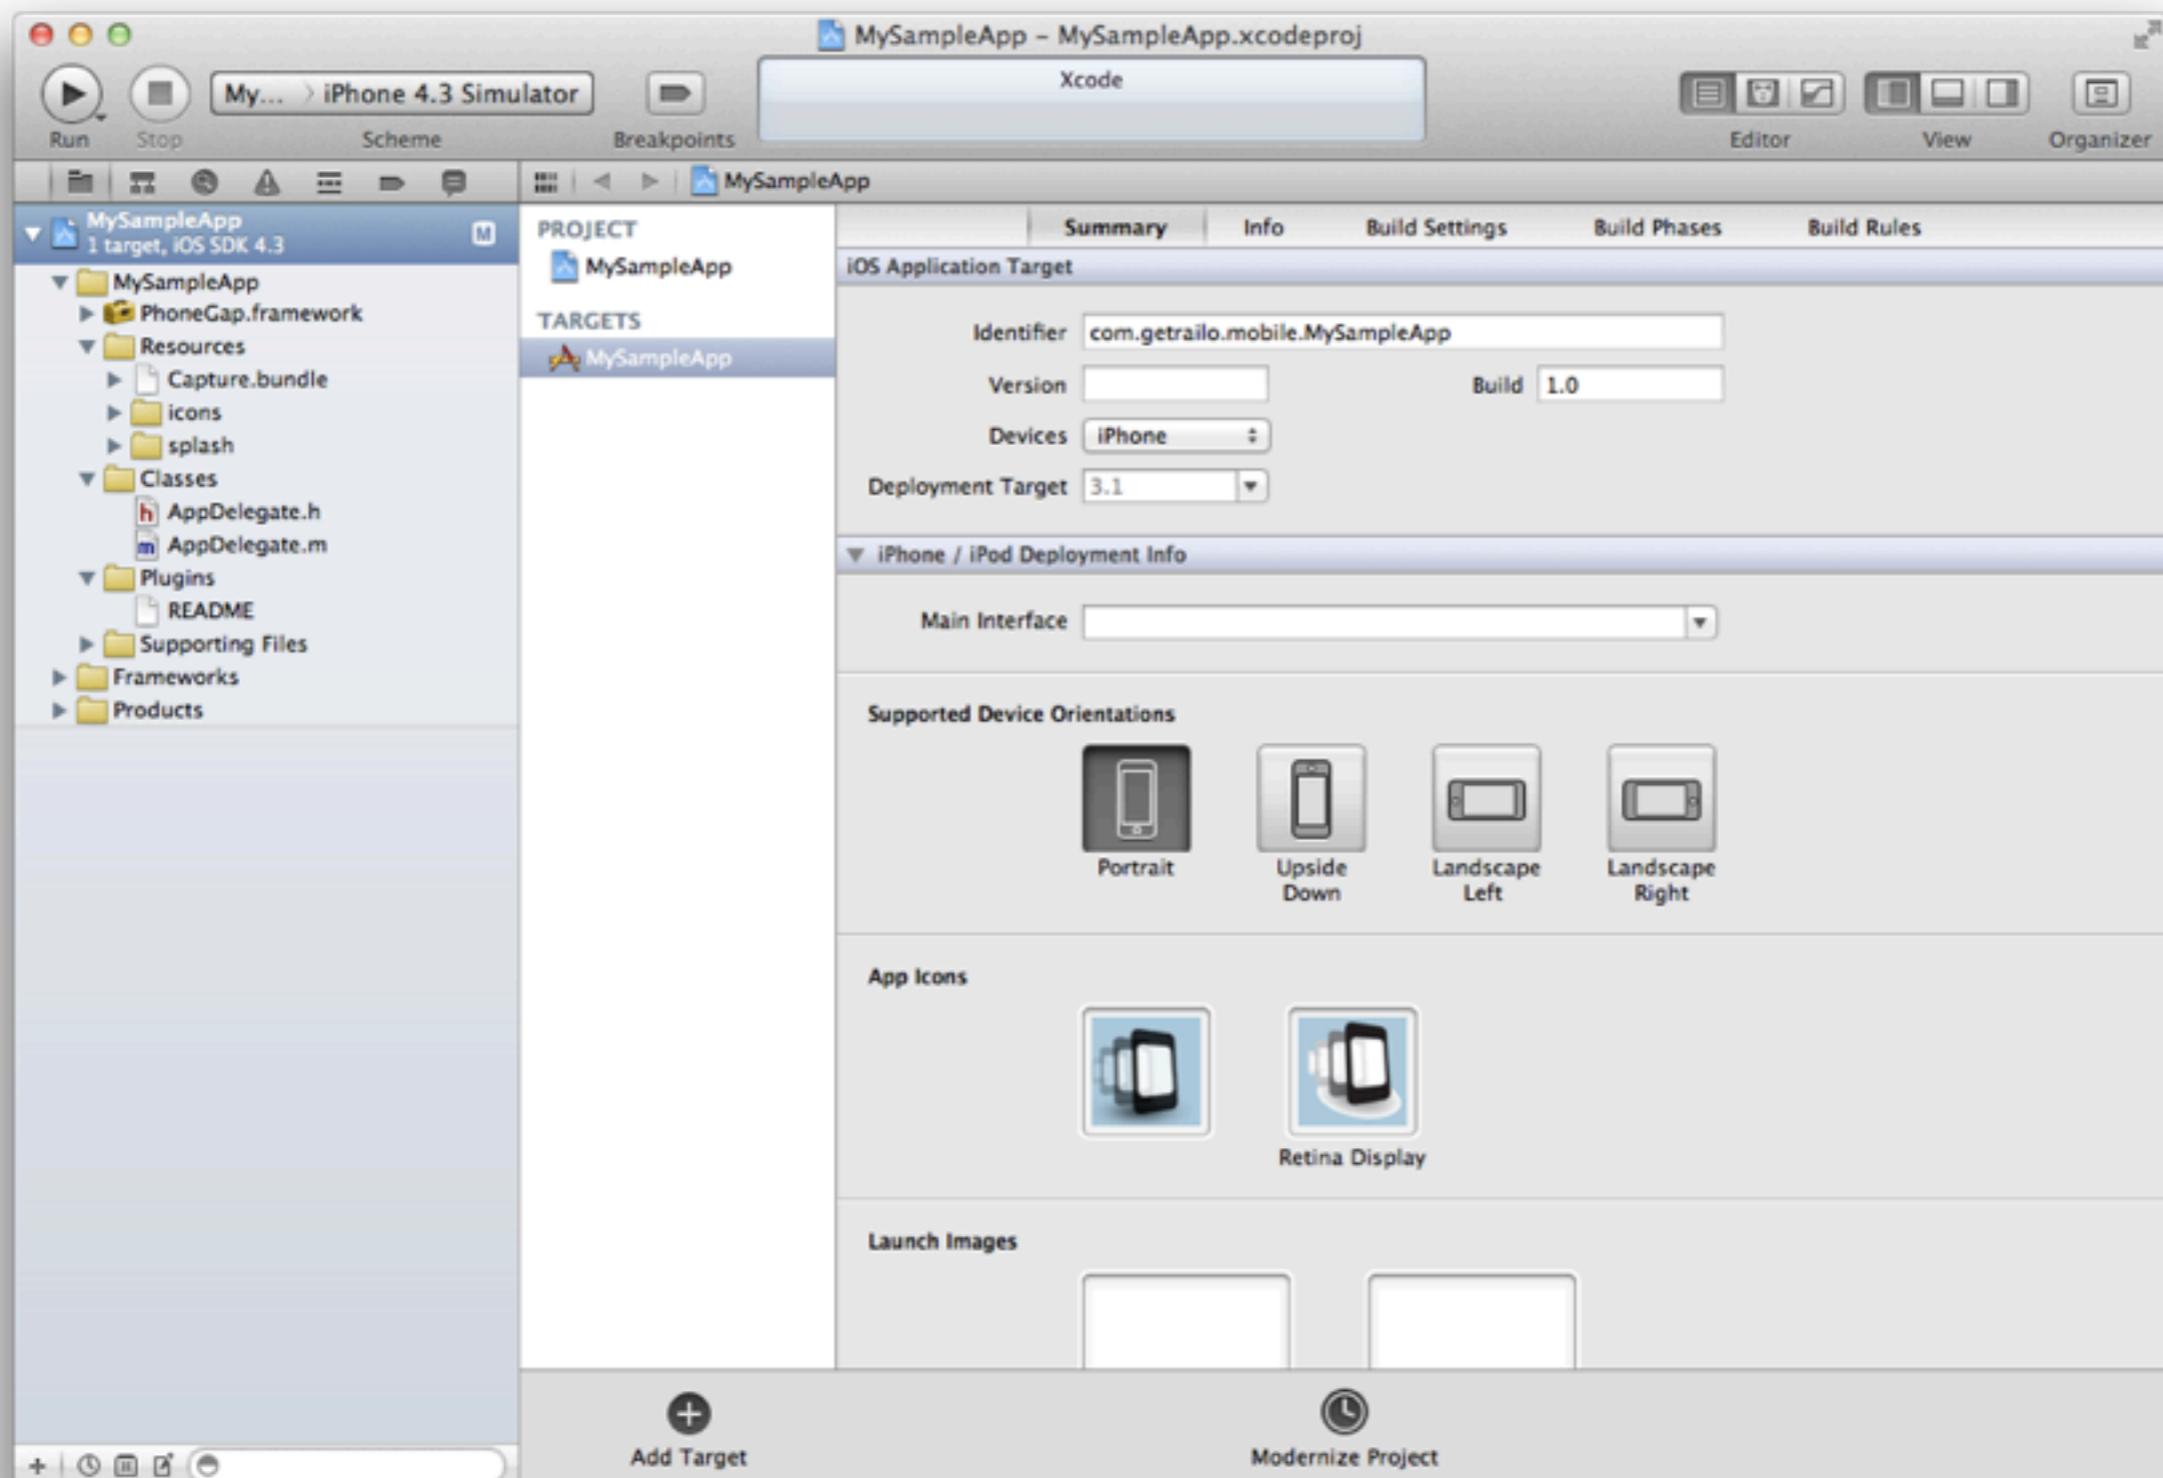

Although there is an extra step... you need to add the www folder.

# Creating an iOS App
